English 207: Health Science Writing  
University of Wisconsin-Milwaukee

Instructor: Sonia Khatchadourian, Senior Lecturer

This course is particularly appropriate for students in the College of Health Sciences, the College of Nursing, Pre-Medicine, Dental, other medical fields, and the Professional Writing Program.

As this course is intended for students from a variety of disciplines, it focuses on writing professionally and effectively within Health Science fields, rather than on writing tasks or formats for any one medical specialty.

Course Goals/Learning Objectives
The primary learning objectives of this course are to:
- Address various purposes
- Adapt to various audiences
- Organize documents based on types of messages
- Format professional documents
- Construct sentences that are precise and concise
- Use medical and scientific databases effectively to conduct research
- Analyze and evaluate sources
- Incorporate research into documents
- Document sources
- Convey written report data in a presentation format

Types of Assignments
The types of assignments that students may be asked to write to achieve the learning objectives include: writing short professional documents (memos and letters); preparing a literature review and annotated bibliography; creating a fact sheet; conducting research and writing a professional report based on a current health issue; and, giving a presentation based on the report.

Prerequisites
Satisfaction of GER English Composition competency requirement. May not be taken credit/no credit.

Required Texts
