**Engl 890: Science, Communications, and Public Engagement** is devoted to teaching scientists and STEM graduate students about effective approaches to public communication of science. Students will learn about and have opportunities to practice communicating about science and scientific issues for a variety of public and policy settings. The course will focus, in particular, on exploring effective strategies for catalyzing public engagement with environmental science and environmental-policy issues.

After completing this course, students will be able to:

- Effectively analyze and dissect the communication strategies used in the dissemination of scientific research.
- Effectively analyze the needs a variety of different audiences including disciplinary and interdisciplinary scientists, public stakeholders, and policy-makers.
- Effectively develop and deploy compelling science communication for a variety of audiences, purposes, contexts, modes, and media.
- Effectively situate science communication within broader social, political, ethical, and regulatory contexts.
