ANNUAL REPORT OF THE SAFETY COMMITTEE, 1966-67

The UWM Safety Committee met during the course of the year to deal with problems of safety policy and procedure in cooperation with the Safety Coordinator, the UW Safety Director, the Department of Buildings and Grounds and Plant Protection.

Reports of hazardous conditions, referred to the Committee by faculty and students, were brought to the attention of the appropriate University personnel. The Safety Coordinator was again asked to obtain the aid of the Milwaukee Fire Department and run practice and educational sessions for fire safety and evacuation procedures. This program will continue to be developed.

It will soon be proposed that a permanent committee be established for dealing with policies concerning radioactive materials. This program will be developed in accordance with AEC Regulations. It is necessary that the committee and policies be established before broad license for use of radioactive materials will be granted.
