Recommendation of the faculty of the School of Architecture to change the name of the Bachelor of Science Degree in Architectural Studies to the Bachelor of Science in Environmental Design.

In June 1974, the School of Architecture was accredited by the National Architectural Accrediting Board for a period of five years subject to submission of satisfactory annual reports and to an interim visit by a representative of the Board after a two year period. It was the recommendation of the Accrediting Review Board (contained in their report dated July 12, 1974, p.10) that "The undergraduate degree (Bachelor of Science in Architectural Studies) be renamed to a Bachelor of Science in Environmental Design." The change in degree is a change in title only and will not change the existing undergraduate curriculum in the School of Architecture. The Board made its recommendation in an attempt to make the undergraduate degree designation in Architecture compatible with undergraduate degree programs with similar curriculum in other Schools of Architecture, and to clearly distinguish the non-professional undergraduate degree offered by the School from the professional graduate degree. The faculty of the School of Architecture, at its meeting of October 8, 1974, concurred with the recommendation of the National Architectural Accrediting Board.
